

Targeted Renewable Electricity RFQ / RFP Package v0.1

> CLIENT-FACING STRUCTURE DRAFT • Client name / sites / volume / dates / bidders / legal terms 皆為 TBD WITH CLIENT • 本文件不是 offer、award、legal advice 或 AMAT commitment •

1. Purpose and process status

The Buyer intends to obtain non-binding / binding proposals **as specified in the final issued package** for Taiwan renewable electricity procurement. The final process type, authority and reservation of rights must be confirmed by Buyer Procurement and Legal before issue.

2. Bidder instructions

- submit through the approved channel by [TBD date/time/time zone];
- use Supplier_Response_Template.xlsx; do not change IDs, units or formulas;
- state all assumptions, exceptions, validity and dependencies;
- distinguish contracting entity, project owner, generator, retailer and guarantor;
- mark confidential information and identify permitted recipients / use;
- direct questions only to [TBD single point of contact]; no side-channel lobbying;
- Buyer / advisor may clarify, shortlist, negotiate, amend or discontinue subject to final legal language.

3. Requirement summary

Bidder must respond to volume / profile, start / COD, tenor, technology, site / delivery interface, certificate treatment, pricing / index / settlement, flexibility, project maturity, credit / guarantee, conditions precedent, risk allocation and implementation readiness. All Buyer-specific values remain TBD until G6 approval.

4. Mandatory response structure

1. organisation / contracting chain and authorized contact;
2. route / asset stable IDs and ownership / control evidence;
3. volume / generation profile / firmness / allocation;
4. COD / start / milestones / delay remedy;
5. tenor / ramp / flex / renewal / exit;
6. pricing components, units, currency, tax / fees, index / escalation, settlement examples;
7. wheeling / meter / loss / site prerequisites and responsibilities;
8. T-REC issuance / transfer / ownership / timing / replacement / no double claim;
9. credit / guarantees / parent support / security;
10. curtailment / shortfall / force majeure / change / default / termination positions;
11. implementation plan, data / reporting and BAU contacts;

12. deviations, validity, evidence index and conflicts.

5. Pricing and comparability rules

Quote each component separately and an all-in reconciliation where possible. Use the issued volume / profile / start / base-date assumptions; provide sensitivity for specified changes. A blank means NOT PROVIDED, not zero. Suppliers must identify pass-through items, exclusions, caps / floors, escalation, loss factor, taxes, fees and credit cost. Optimum will normalize for comparison without disclosing one supplier's confidential offer to another.

6. Evidence requirements

Each material claim links to a document / source ID and as-of date. Company capability is not asset availability. Bidder states whether evidence is provided now, available in DD, unavailable or not applicable. Buyer may condition evaluation on verification.

7. Q&A and addenda

Questions close at [TBD]; anonymised process-relevant answers may be shared equally. Material assumption changes issue as numbered addenda with acknowledgement. Individual confidential clarifications remain restricted but cannot silently change common evaluation rules.

8. Evaluation overview

Stage 1: completeness, eligibility and hard constraints. Stage 2: commercial / volume / timing / flexibility. Stage 3: project / execution / certificate / counterparty DD. Stage 4: shortlist decision and negotiation mandate. Final weights and approvers are TBD WITH CLIENT; lowest headline price does not guarantee selection.

9. Timetable placeholder

Issue → bidder briefing → question deadline → addendum → response deadline → completeness clarification → evaluation / DD → shortlist → negotiation. Dates and time zone require client approval; late-response treatment must be stated before issue.

10. Legal / confidentiality boundary

Final NDA, solicitation terms, disclaimers, anti-collusion, data protection, governing law and reservation rights require Buyer Legal / Procurement approval. Optimum provides commercial process support and does not replace legal counsel.
