

Negotiation & Internal Decision Memo

v0.1

> PRE-DECISION STRUCTURE DRAFT。所有 supplier、terms、numbers、options 與 recommendation 皆為 SYNTHETIC / DEMO DATA 或 TBD WITH CLIENT。

Decision requested

選擇：ACCEPT SUBJECT TO DOCUMENTS、COUNTER WITH MANDATE、CONTINUE CLARIFICATION、SWITCH / ACTIVATE FALLBACK、PAUSE 或 STOP；同時核准 residual risks、conditions、owner / date 與 external communication。

What changed

從上次 G8 / round-1 baseline 只呈現 material deltas：volume / timing、price / index / settlement、COD / shortfall、wheeling / certificate、credit / security、default / termination、implementation / data。每項引用 term / issue ID 與 controlled document version。

Decision scenarios

1. **Preferred package**：best current integrated terms + unresolved conditions；
2. **Counter package**：specified trade / authority / expiry；
3. **Fallback**：reserve bidder / structure / bridge / reduced volume；
4. **No-deal / delay**：gap、budget、deadline、resource 與 relationship effect。

比較 normalized cost / exposure、coverage / timing、execution confidence、certificate / claim、credit、contract residual risk、internal readiness 與 option value。若不能量化，用 range + reason + confidence。

Risk acceptance

每項 residual risk 列 event、downside、likelihood / impact definition、current allocation、mitigation、counsel / specialist view、risk acceptor、decision。沉默不等於接受；條件式接受需具體 condition 與 deadline。

Preliminary judgement

HYPOTHESIS：只有當 remaining P0 / P1 issues 已有 accepted allocation 或可在 signing 前以明確 condition 關閉，才適合進 3.5；否則應維持 counter / fallback，不用進度壓力取代 decision。

Decision record

記錄 chosen option、reason、rejected alternatives、assumptions、dissent、conditions、authorized message、next document owner、validity / expiry 與 next gate。Supporting methodology 與完整 redlines 留在 tracker / counsel workspace，不塞進 executive deck。
